SAP SECURITY SERVICES

Security is the one of the most important area of SAP implementation which is often neglected. The reasons for this neglect could be because of various reasons such as SAP Security being perceived as cumbersome, time consuming and having little value addition to the implementation. But now companies are starting to realize the importance of implementing SAP R3 securities for various reasons. Companies have started to realize that a poor SAP Security setup increases the risks of exposing their systems to fraud, harm business relations and contribute to wrong business decisions.

Moreover the companies are now required to implement their business processes and practices in compliance with SOX and SEC rules and regulations. Even those who have implemented security, often realize that their procedures and processes have loopholes. Auditors are also looking more closely how companies are implementing their security procedures and policies. So it makes all the more important for companies to have a robust security setup.

Our practical experience reveals that, though we focus on authorizations, we also bring added value to the implementation team with regard to internal control and fraud prevention principles.

Implementation and Support

Our Workforce have a extensive knowledge and experience in the newest SAP releases (ECC 6.0, WAS 7.00) as well as Netweaver 2004s components (BW/BI 7.0, Enterprise Portals, CRM, APO, XI.. .); Depending on the feasibility and circumstances, our consultants try to make utmost use of the SAP'S standard tools and features such as CUA, CATT/ECATT, LDAP etc to save the customer time and maintenance costs.

SOX and Audit Review

This service focuses on analyzing the authorization weaknesses and defining other controls to counter the weaknesses that cannot be solved. The focus is on section 404 and its application to IT (SAP) security. One security aspect is to ensure that no backdoors can be used to intrude on or interfere with the functioning of a businesscritical system like SAP R3. We perform audits on the security of the IT infrastructure used for SAP environment.

We offer implementation, configuration and support of SecurityWeaver and GRC 5.1/5.2 suite of tools including, Compliance Calibrator, Access Enforcer, FireFighter and Role Expert

AdvIT is an partner of SecurityWeaver
